

Rhyme correspondences between Sinitic and Uralic languages: Observing from Hungarian

Jingyi GAO

University of Tartu & Estonian Institute of Language

Gao (2014l, 2014s, 2015s) identified shared etymologies and five rhyme correspondences between Sinitic and Uralic languages observing from Finnish and Estonian. The present study identifies ten etymologies shared by Sinitic and Uralic languages observing from Hungarian. Five of these ten etymologies are not previously compared by other scholars. Eight of these ten etymologies belong to three rhyme correspondences. The regular sound correspondences validate these etymologies. These etymologies support the Sino-Uralic affinity.
